Given and signed at Chevery, this 19th day of May, 2023.

Karine Monger  
Director General and Secretary-Treasurer

### Context

The MRC du Golfe-du-Saint-Laurent presents its first waste management plan (PGMR) to the population. The purpose of the PGMR is to help the MRC and the municipalities plan their activities and services in waste management for the next seven years.

After the public consultation, the draft PGMR applicable to the 2023-2030 period will be submitted to RECYC-QUÉBEC for approval.

### Key Facts

It is estimated that each citizen of the MRC disposes of an average of 838 kg of waste per year, including the three sectors: residential, industrial, commercial and institutional (ICI) and construction, renovation and demolition (CRD).

The overall recovery rate for these three sectors is estimated at 11%, with an advantage for the residential sector at 23%. The materials recovered are mainly through drop-off points for recyclable materials, home composting and the recovery of CRD waste.

### Action plan

The action plan of the PGMR aims to achieve the recycling targets of the Quebec government, but in a realistic manner taking into account the current situation of the MRC:

- Eliminate a maximum of 525 kg per capita in 2030;
- Recycle 40% of recyclable materials from the selective collection by 2030;
- Recycle 40% of organic materials by 2030;
- Recycle 50% of CRD waste by 2030.

The measures proposed in the action plan concern the following aspects:

- **Governance:** delegation of powers from the municipalities to the MRC so that the latter can enter into agreements with designated management organizations (recyclable materials, paint, electronics, household appliances, etc.);
- **Knowledge in waste management:** characterization of waste, electronic register of quantities loaded;
- **Reduction in disposal quantities:** support for reuse, community composting, reclamation of sludge from aerated ponds, crushing of concrete for reuse, etc.
